DETAILED ACTION

1. This action is in response to applicant's amendment filed on November 28, 2006.

Claims 1-5 and 13-17 are still pending in the present application. **This Action is made FINAL.**

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37-CFR 3.73(b).

3. Claims 1-5 and 13-17 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 8 of U.S. Patent No. 6,665,277 B1 in view of Wong et al (U.S. Patent No. 6,233,466 B1).

Referring to claims 1 and 13, all elements of claims 1 and 13 are disclosed in claims 1 and 8 of U.S. Patent No. 6,665,277 B1.

Art Unit: 2617

However, U.S. Patent No. 6,665,277 B1 does not specifically claim synchronization code over channels during a first symbol time in each of the predetermined number of time slots.

Wong discloses synchronization code over channels during a first symbol time in each of the predetermined number of time slots (figure 3 and col. 6, line 58 through col. 7, line 6, "synchronization codes . . . are transmitted simultaneously during a shorts . . . interval at the beginning of the time slot", "primary synchronization code", "secondary synchronization code").

It would have been obvious to one of the ordinary skill in the art at the time of invention to modify claims 1 and 8 of U.S. Patent No. 6,665,277 B1 by incorporating the teachings of Wong et al, and consequently providing synchronization code over channels during a first symbol time in each of the predetermined number of time slots, so that the decoder would be programmed to look for the synchronization code at the beginning of a time slot and allow the receiver to know the time at which these codes are to be transmitted within the data stream, and consequently identifying the codes embedded within the data.

Response to Arguments

4. Applicant's arguments filed on November 28, 2006 with respect to claims 1-5 and 13-17 were fully considered but they are not persuasive. Applicant argues "Wong et al. patent bears a filing date of April 8, 1999 which is subsequent to the effective filing date of the subject application of October 19, 1998 since the invention as claimed is fully disclosed in the priority document filed on that date". The examiner respectfully disagrees with the applicant's allegations and submits that the subject priority application

Art Unit: 2617

of October 16, 1998 does not include or mention the inventive concepts claimed in the present application. In particular, there is no disclosure of "synchronization code over respective adjacent channels during a first symbol time in each of said predetermined number of time slots". Therefore the priority date claimed by the applicant is denied.

Conclusion

5. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
